15:20h - 16:50h	DF 140	<p>Invited Student Session</p> <p>Session Chair: Tim Arnett</p>	<p>Title: Explainable Fuzzy AI Challenge (XFC 2023)</p> <p>Organizers: Tim Arnett, Javier Viana, Lynn Pickering, Sam King, Nick Ernest</p> <p>Description of the XFC: In this challenge, the teams have to create a fully autonomous eXplainable AI (XAI) XAI algorithm, in Python, that is able to play the Python Arcade Game “Asteroid Smasher”. In the game, a 2-dimensional spacecraft moves to avoid collisions with numerous asteroids that appear. The asteroids have different shapes, sizes, and velocities. The spacecraft also has a weapon that can shoot straight ahead. If the projectiles emitted reach any of the target asteroids, they break into smaller pieces. The smallest asteroid pieces disappear after being hit by a projectile. A control system must consider all the different features of the system and determine the movement and shooting decisions of the spacecraft. This year, for the challenge, the control system must be able to control a game with a single vehicle or multiple vehicles.</p> <p>Session Agenda:</p> <ul style="list-style-type: none"> ▪ Introduction and highlight video ▪ Announcing top Winners ▪ Recorded Presentations of 5 mins for each of the winners of the competition ▪ Lessons Learned ▪ The Next Landmark – XFC 2024 & roadmap ▪ Discussion with the judges/sponsors, their thoughts, and comments ▪ Open discussion and Q&A
